

Site Components

This is a document outlining the components that should separate different parts of the site. These plans are a guideline and susceptible to change.

Landing Page

URL: *terrariadle.net*

No components needed, just a nav

Game icon tabs shouldn't show up when on landing page

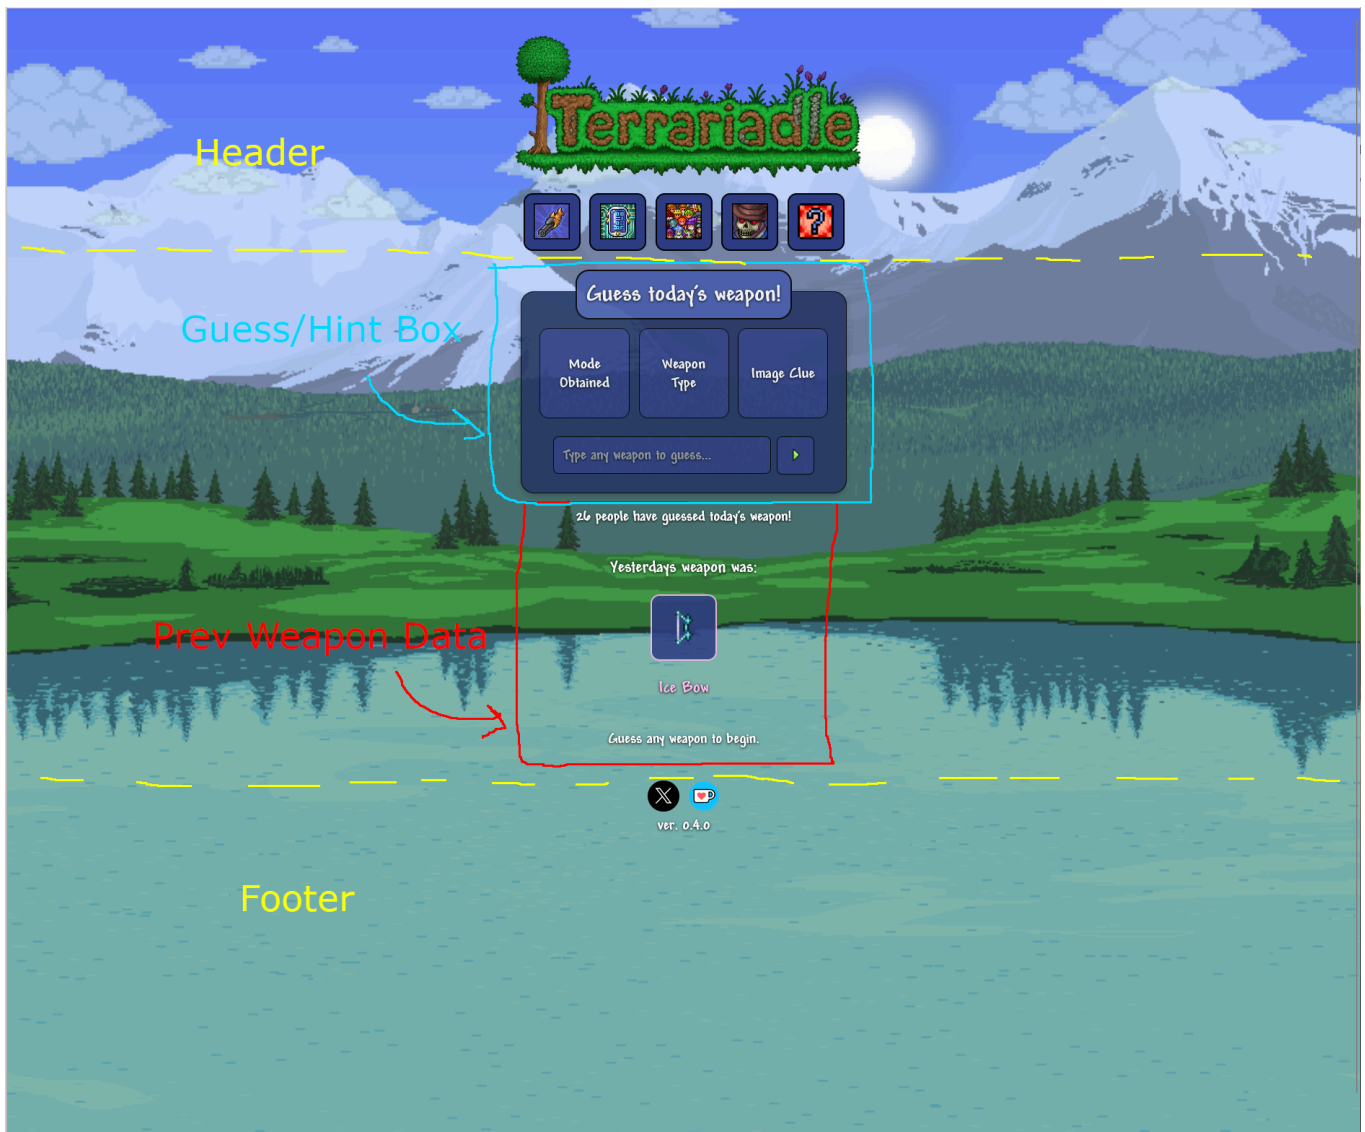

Daily Slash

URL: *terrariadle.net/daily-slash _*

This is the site before any guesses have been made.

Guess/Hint Box: **DsGuessPanel**

Prev Weapon Data: **PrevWeaponGroup**

This is the page after guesses are made.

Guess/Hint Box: **GuessPanel.svelte**

Winning Component: **WinningPanel.svelte**

Guess Table: **GuessList.svelte**

Guess Row: **GuessRow.svelte**

Terraria Connections

URL: terrariadle.net/terraria-connections_

This is the site before any guesses have been made.

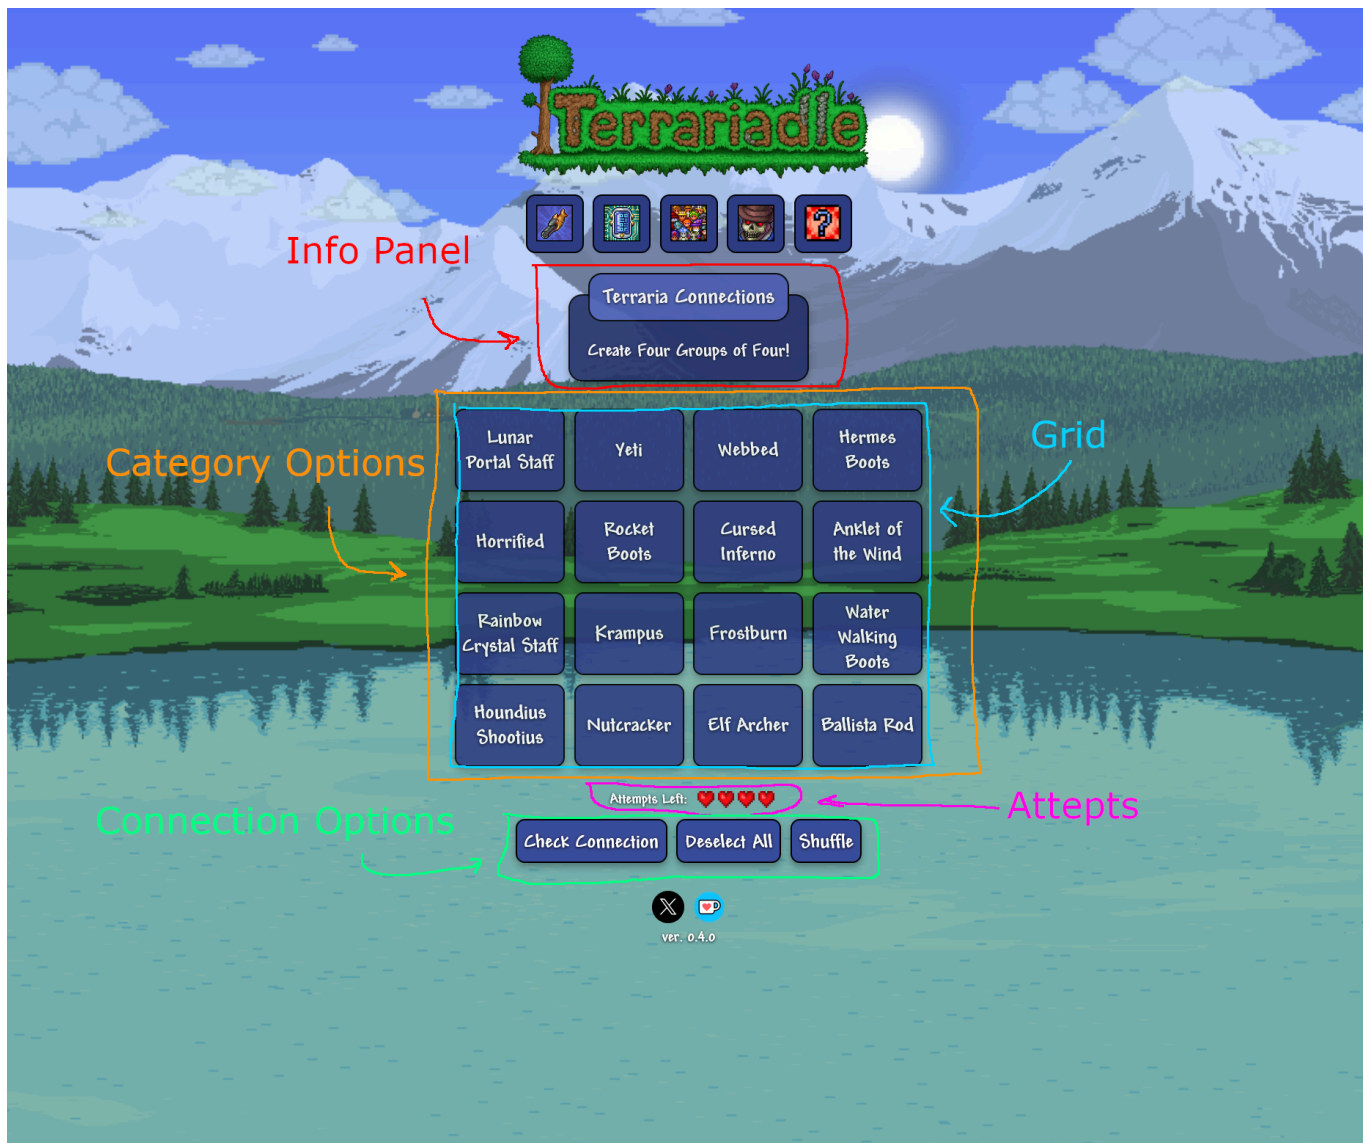

Info Panel: **InfoPanel.svelte**

Category Options: **Gameboard.svelte**

Grid: **Grid.svelte**

Attempts: **Attempts.svelte**

Connection Options: **GameControls.svelte**

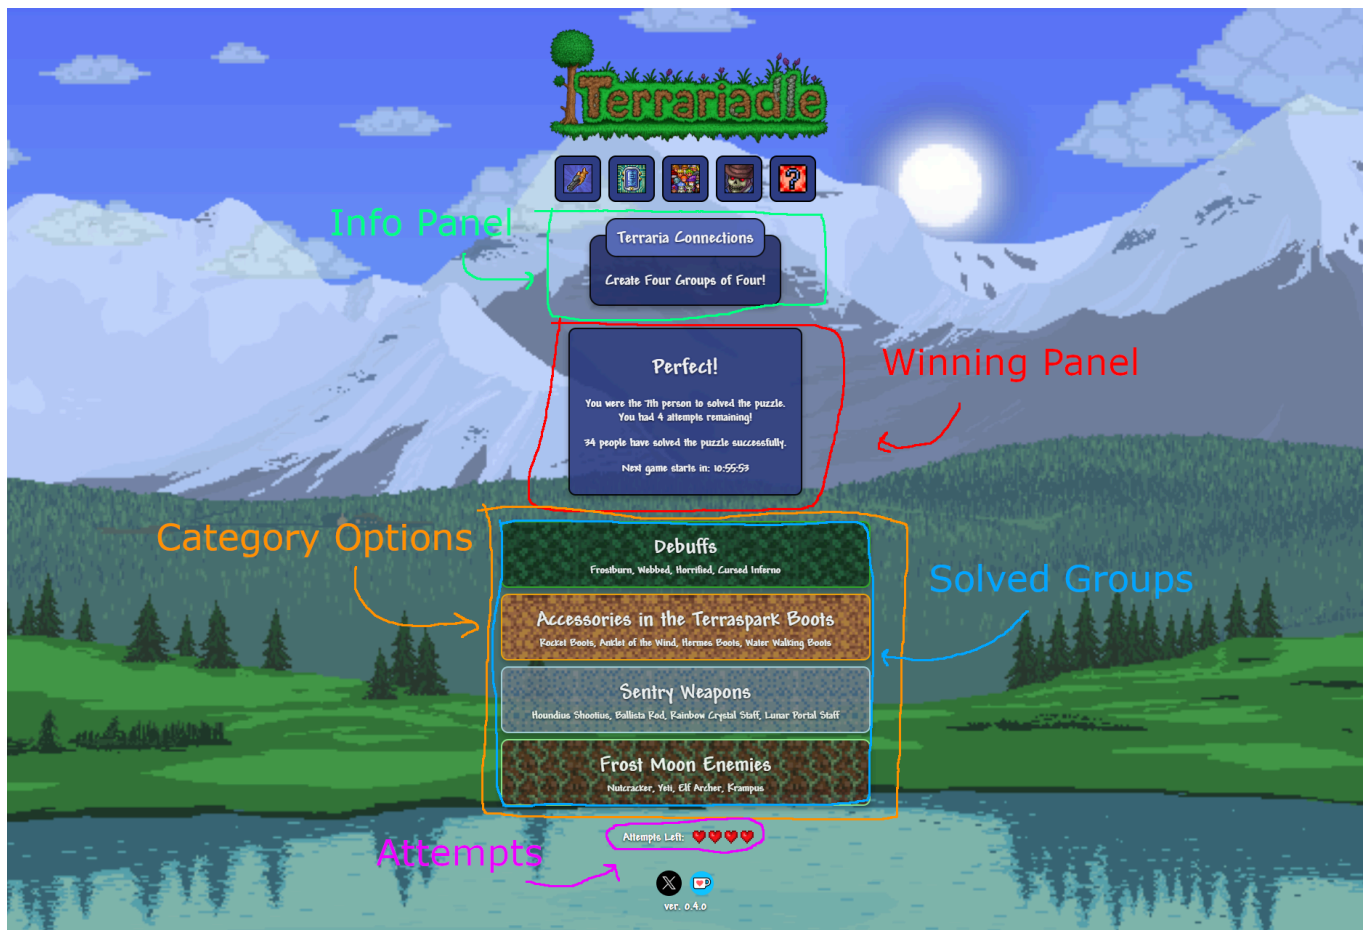

After user has guessed:

Info Panel: **InfoPanel.svelte**

Category Options: **Gameboard.svelte**

Solved Groups: **SolvedGroups.svelte**

Attempts: **Attempts.svelte**

Extra Notes:

```
<GameBoard>
  <Grid tiles={unsolvedTiles} />      // CSS Grid, shrinking as groups are
  solved
  <SolvedGroups groups={solvedSets} /> // New rows added as you solve
</GameBoard>
```

- **At the start:**
 - `<Grid>` has 16 Tiles laid out with CSS Grid (`grid-template-columns: repeat(4, 1fr)`).
- **On correct guess (4 tiles):**
 - Those 4 tiles are removed from `unsolvedTiles` .
 - They are added to `solvedSets` (with category + assigned color).
- **What happens visually:**
 - `<Grid>` re-renders with 12 tiles (still arranged 4×3).
 - `<SolvedGroups>` renders a new `<GroupRow>` with 4 locked tiles + category label.
- **As you keep solving:**
 - Grid shrinks: 16 → 12 → 8 → 4 → 0.

- SolvedGroups grows: 0 → 1 row → 2 → 3 → 4.

Guess The NPC

URL: terrariadle.net/guess-the-npc_

This is before anyone guesses on it.

Info Panel: **InfoPanel.svelte**

Guess Box: **GuessPanel.svelte**

This is after the user has guessed:

Info Panel: **InfoPanel.svelte**

Guess Box: **GuessPanel.svelte**

Winning Component: **WinningPanel.svelte**

Bonus Round: **BonusGame.svelte**

Guesses: **Guesses.svelte**

Hangman

URL: terrariadle.net/hangman_

Before the user has guessed:

Info Panel: **InfoPanel.svelte**

Attempts: **AttemptsDisplay.svelte**

Enemy Name: **PhrasePanel.svelte**

Keyboard: **Keyboard.svelte**

After the user has guessed:

Info Panel: **InfoPanel.svelte**

Attempts: **AttemptsDisplay.svelte**

Winning Component: **WinningPanel.svelte**

Enemy Name: **PhrasePanel.svelte**

Wordaria

URL: terrariadle.net/wordaria_

Before they guess:

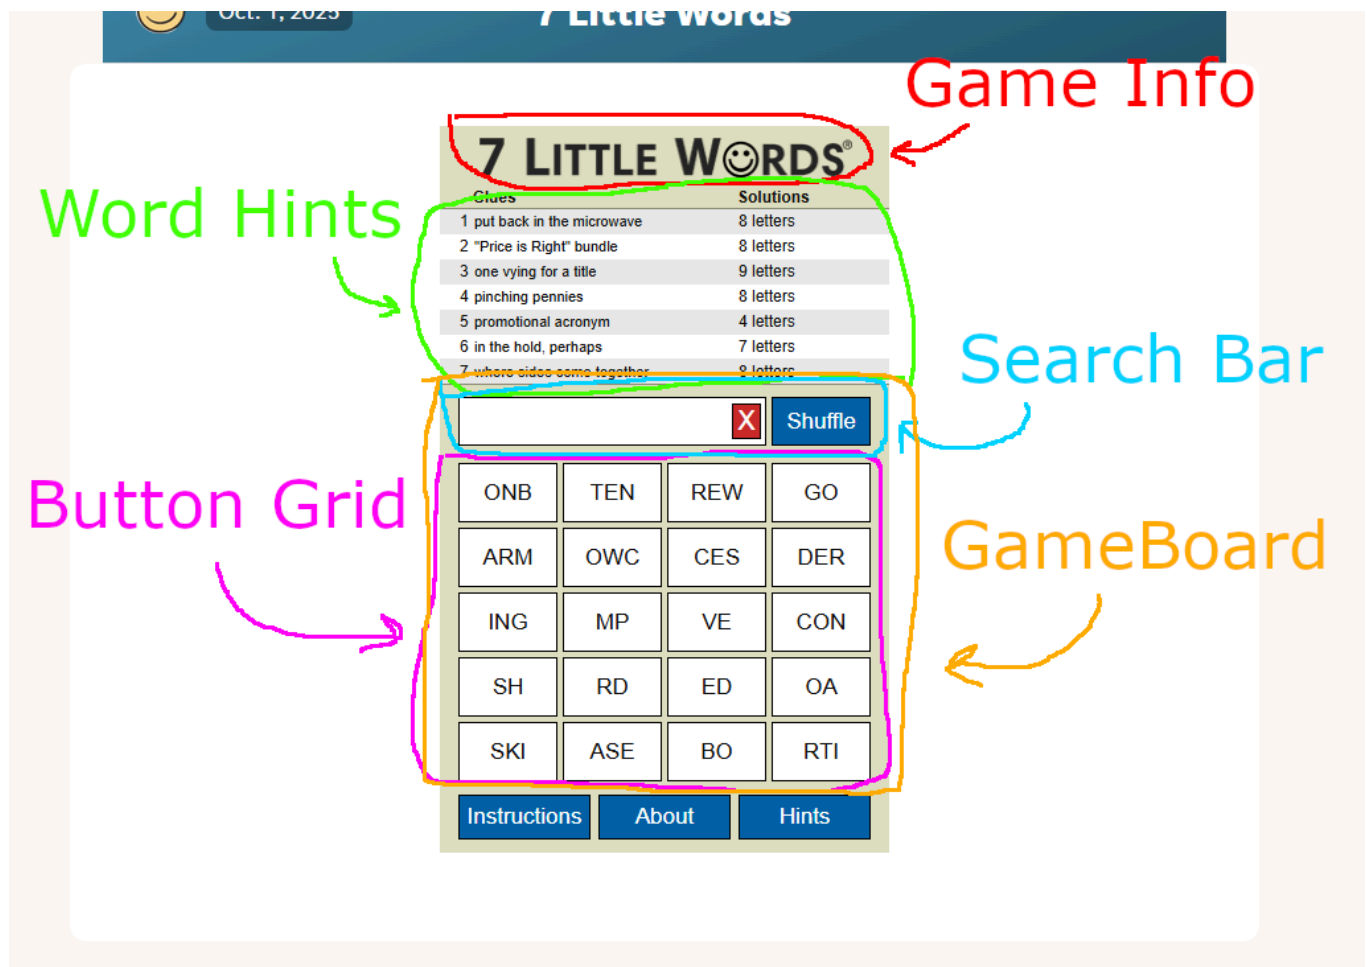

Game Info: **InfoPanel.svelte**

Word Hints: **WordHints.svelte**

Gameboard: **Gameboard.svelte**

Search Bar: **SearchBar.svelte**

Button Grid: **ButtonGrid.svelte**

After user has guessed will come after implementation, only expected extra component is the winning component.
